

BB OPTI-LAY 16

MASH FORM- Birds can consume the product easily with less waste.

SELENIUM YEAST – At .3ppm level, this important antioxidant can improve selenium levels in the muscle, whole egg, egg yolk, egg albumen, egg shell, and yolk and shell membranes, improving egg shell quality by increasing shell thickness, specific gravity, and/or breaking strength. It also may improve haugh units, a measure of internal egg quality and freshness, improved egg yolk color, and increased Vitamin E levels.

HIGH CALCIUM LEVELS- Important for maintaining egg shell quality. Higher calcium levels result in a stronger egg shell even in larger eggs.

MINERALS AND VITAMINS- Contains the balanced levels of Micro and Trace Minerals along with vitamins for maximum egg production and shell strength.

NATURAL PROTEIN SOURCE- Combines several plant and animal (pork meat and bone meal, fish meal, and blood meal) sources of protein to achieve the amino acid levels necessary for egg production and feather quality.

MANAGEMENT OF LAYER HENS

- Hours of daily light will affect rate of lay.
- Pullet management programs will affect rate of lay.
- 20Wk old pullets should have daily light increased by 15 minutes/day/wk to a maximum of 17hrs of light per day.
- Egg production gradually decreases during the hen's lay cycle.
- Keep feeders and waters clean. Use disinfectant weekly on waterers.

FEED TYPE- COMPLETE GRAIN

FEED FORM- MASH

CODE #21615

PURPOSE STATEMENT- A High Quality Mash Feed For Egg Laying Chickens

GUARANTEED ANALYSIS

Crude Protein (Min).....	16.00%
